Re: Grease waste interceptor upgrade field tests

Dear Mr. Loder,

Our final field test inspection of the grease interceptor on January 14, 2008, just prior to it's scheduled monthly pump out, showed grease and solids levels that were well within compliance of the City of Clearwater Grease Ordinance. Therefore, it has been determined that the installation of the in-line interceptors has been an adequate upgrade to the grease management system at Crabby Bill's. The Notice of Violation issued 5/16/07 has been satisfied.

We appreciate your timely compliance in this matter. It has truly been a pleasure working with you in finding a way to achieve these satisfactory results.

Sincerely,

Robert H. Powers,
 Industrial Pretreatment Coordinator
